

**FILEN**

# Zero-Knowledge Cloud Storage

---

**PRIVACY** BY DESIGN.  
EMPOWERED BY **FEATURES**.  
**TRANSPARENT** BY CHOICE.

# WHAT IS FILEN?

**Filen is an encrypted cloud storage service that puts privacy first.**

Cloud storage enables you to securely store your photos, documents, and videos online, granting you seamless access to your files from anywhere, without the constraints of physical drives or specific devices.

Yet, this convenience typically comes with a hidden cost: **your privacy.**

**Filen redefines the cloud.**

Designed from the ground up around **zero-knowledge** encryption, Filen ensures that your files remain fully encrypted before they leave your device. This means no one, not even Filen, can view or access your data.

Every feature, from seamless syncing and sharing to real-time collaboration, maintains this same uncompromising level of privacy.

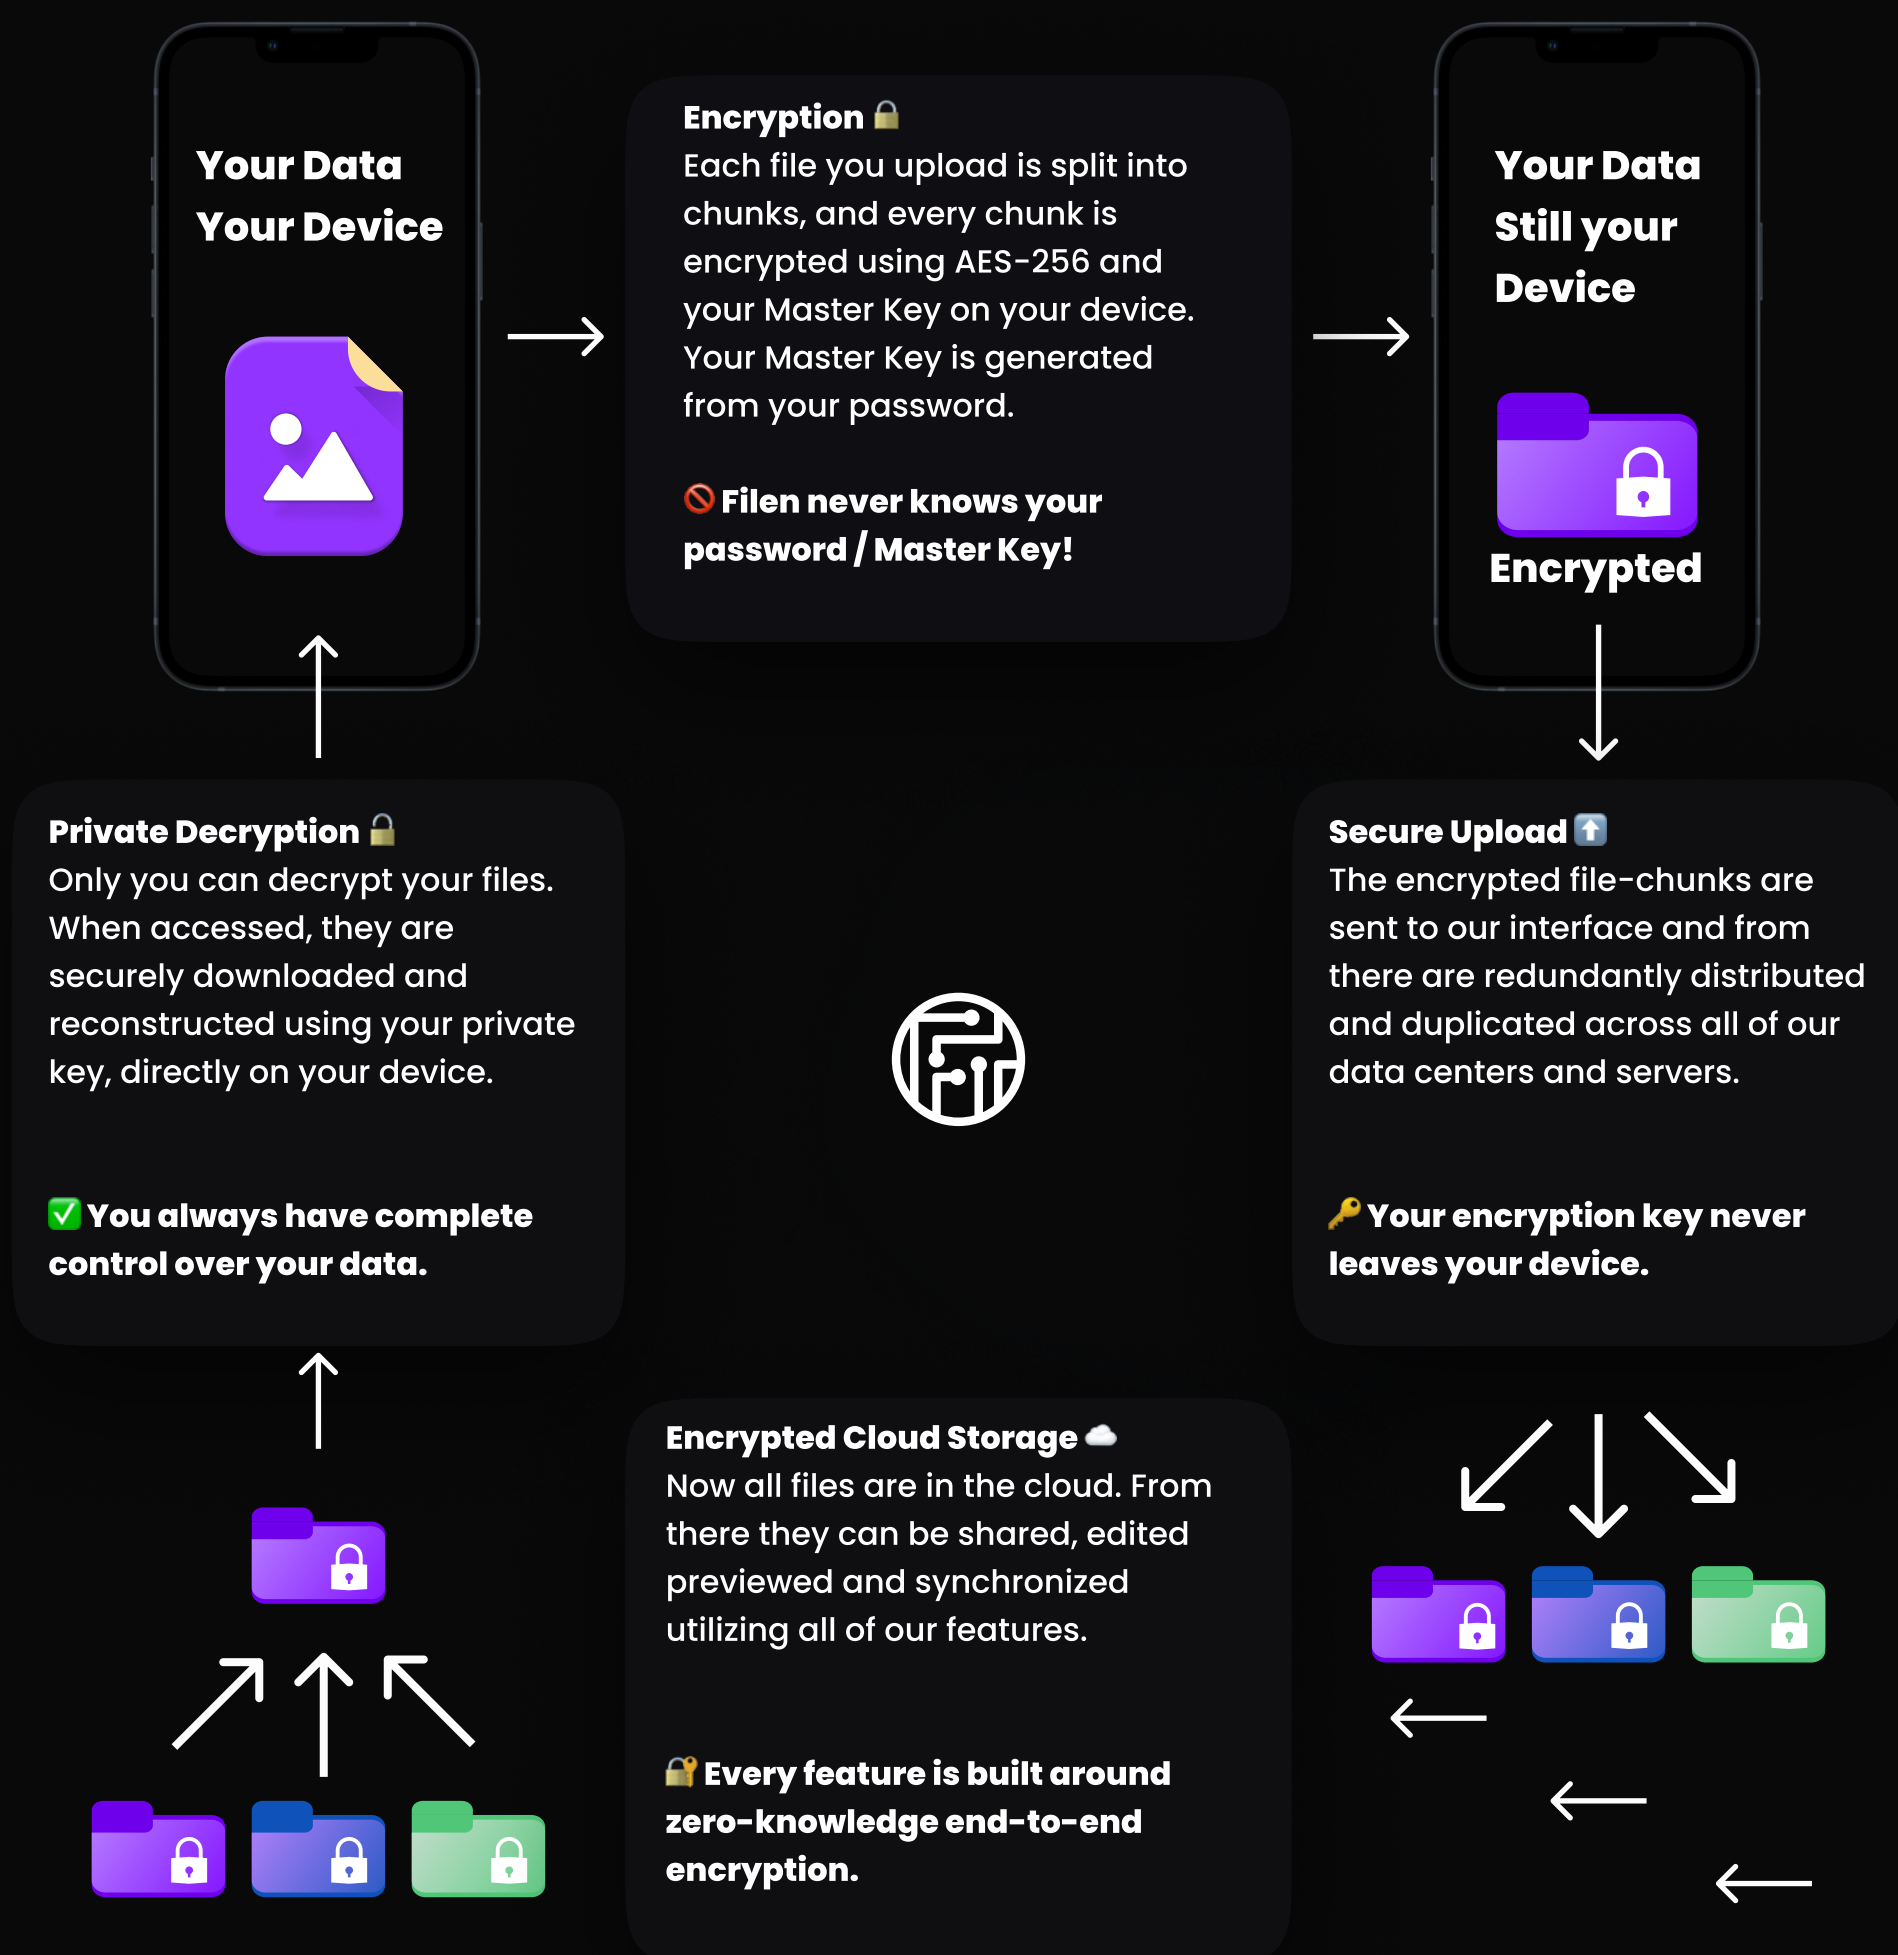

Founded in 2021 in Recklinghausen, Germany, Filen is committed to **transparency**, operating openly with an **open-source** codebase.

We believe security should be transparent, **sustainable**, and accessible to everyone, which is why our fully self-hosted infrastructure runs entirely on **100% renewable energy.**

**With Filen, you'll never have to sacrifice your privacy for convenience again.**

# ENCRYPTION & PRIVACY

At Filen, your privacy isn't an optional add-on, it's built into every file you upload. Our unique approach relies on zero-knowledge encryption, meaning only you can unlock your data.

This entire process happens seamlessly in the background, requiring no technical effort from you, but ensuring total privacy at every step.

# TECHNOLOGY & INFRASTRUCTURE

**Privacy doesn't end with encryption.** It also depends on where your data is stored and who controls it. At Filen, we run our entire infrastructure independently. All servers are self-hosted and located in Germany, ensuring full control and compliance with strong privacy laws.

## Physical Security

Our **ISO 27001-certified** data centers are secured with 24/7 video surveillance and professional on-site staff. Access is tightly controlled through multiple authentication layers. Fireproof rooms with Argon gas systems provide added protection against physical threats.

## Redundancy and Reliability

We use **8+3 erasure coding** to keep files safe even if parts of the storage system fail. Dual power supply, UPS systems, backup generators, and redundant cooling and networking ensure high availability at all times.

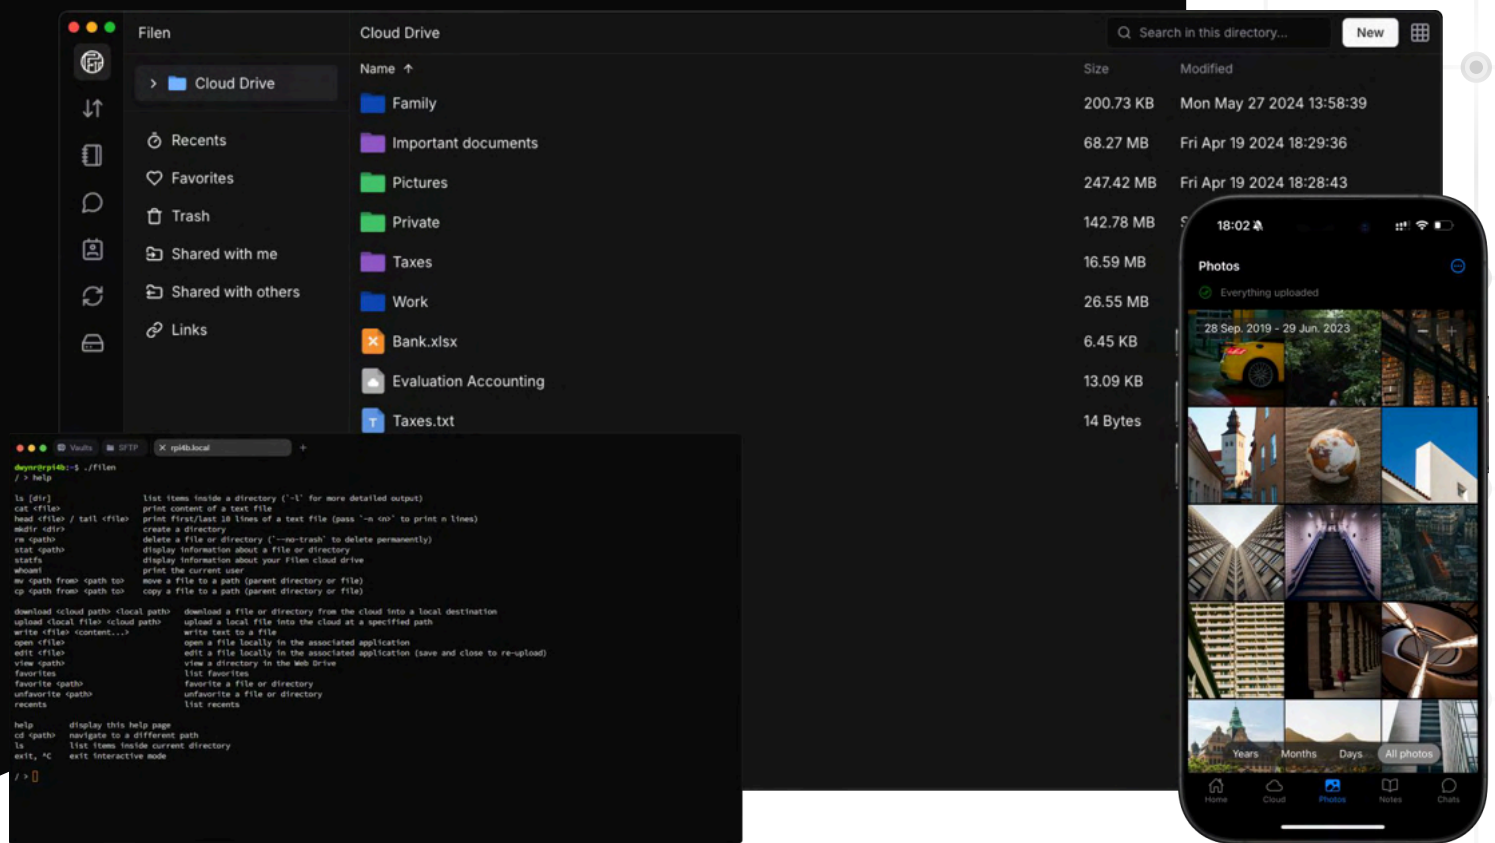

## Built for Trust

We rely on our own infrastructure, not third-party providers. Our platform is **open-source** and explained in detail through regular status updates and whitepapers. Transparency is a core principle in everything we do.

# PRODUCTS

Filen's product suite delivers secure, feature-rich cloud access, built around uncompromising end-to-end encryption and intuitive usability.

## Web App

Access your encrypted files directly in any modern browser. Upload, preview, and share seamlessly through a clean, user-friendly interface.

## Desktop App (Windows, macOS, Linux)

Mount Filen as a **virtual drive** and work with your cloud storage like a local folder. Encrypted files are synced automatically, ensuring real-time backup and easy access.

## Mobile App (iOS & Android)

Carry your encrypted cloud with you. **Automatic photo uploads, offline access, biometric login, and full sync functionality** keep your files private and accessible—anytime, anywhere.

Across all platforms, Filen proves that strong encryption and modern usability can go hand in hand.

# BASIC FEATURES

**Cloud storage should feel effortless without ever compromising on security. That's why Filen integrates essential features into one seamless, encrypted experience.**

**Upload and download** files securely with end-to-end encryption from the start. **Real-time synchronization** keeps all your devices in sync, so you're always up to date—whether working from your desktop, phone, or browser.

Your mobile photos are backed up automatically and encrypted the moment they're captured, while the **virtual drive** lets you interact with your cloud storage just like a local folder—no waiting, no exporting.

Need to share files? Create **encrypted public links** or share directly with selected users—always under your control, always private.

Filen's features are designed not just to work—but to work securely, invisibly, and without getting in your way.

# COLLABORATION

**Filen brings real-time, secure collaboration to the encrypted cloud. Without compromise.**

Built on a zero-knowledge architecture, every interaction, from shared notes to live messaging remains fully private and end-to-end encrypted.

To make teamwork seamless and secure, Filen offers a set of powerful collaboration tools:

## **Filen Notes**

Share fully encrypted notes with others and edit them together in **real time**. With support for **markdown, checklists, and formatting**, they're perfect for planning, documenting, or brainstorming as a team.

## **Filen Chats**

Stay connected with secure, end-to-end encrypted messaging built right into your cloud workspace. Whether in **private one-on-one conversations or dynamic group chats**, you can share messages and files effortlessly.

## **Filen Contacts**

Organize trusted contacts and manage sharing with precision, all while keeping your data private.

# EXPERT TOOLS

for advanced users

**Filen isn't just for everyday users, it's also built for power users and developers who need more control, flexibility, and automation. Our expert tools make it easy to integrate, automate, and scale your cloud workflows.**

## Command Line Interface (CLI)

Automate uploads, downloads, syncs, and more with our powerful CLI tool. Ideal for scripting, cron jobs, and advanced file management, all with full client-side encryption.

## WebDAV Support

Mount your Filen storage as a network drive on any system supporting WebDAV. Seamlessly access and edit files directly from your desktop environment or third-party apps.

## Rclone Integration

Use **Rclone**, the command-line program for managing cloud storage, to sync or transfer data to and from Filen. Perfect for large-scale operations, backups, and cross-platform workflows.

## Developer SDK

Build custom apps and services on top of Filen using our open-source SDKs. Available in multiple languages, our SDKs offer secure and efficient access to all core features of the Filen platform.

# USE CASES

**We solve real-world problems!** Here are a few examples of how people use Filen to stay secure and organized:

## Use Case 1: Everyday Privacy

Lena is a student who cares about digital privacy. She stores her notes, documents and thousands of personal photos with Filen, fully end-to-end encrypted and completely free of ads or tracking.

New photos from her phone are automatically backed up to the cloud, saving storage space and protecting her data, without worrying that a cloud provider might scan through her images. At home she accesses everything from her laptop, always in sync and up to date. Her files stay private, secure and accessible anywhere.

## Use Case 2: Secure Teamwork from Office to Home

A small architecture firm relies on Filen to manage files and collaborate across locations. Project documents stay synchronized through the virtual drive, whether team members are in the office or working remotely.

They use encrypted notes and built-in chat to communicate without third-party tools. Files are shared externally via encrypted links, allowing data to be sent securely to clients and business partners. The result is an efficient and secure workflow from start to finish.

# PLANS & CONTACT

Creating a Filen account is free and gives you access to all core features across Web, Desktop, and Mobile.

Every account includes:

- ✓ 10 GB free storage, forever
- ✓ Unlimited bandwidth
- ✓ End-to-end encryption
- ✓ Sync, sharing, Notes & Chats
